

Bridging Gaps with AI:

ENHANCING ANALYSIS, EVALUATION AND COMMUNICATION IN ENGINEERING PROJECTS

Briefing

- MISSION 1: Find Gap and Evaluate Impact Faster
- MISSION 2: System Models Translation Into Business Language
- Special agent-based software
- Code name: Gen AI
- Debriefing

Operational Team

Requirements Engineering,
Systems Architecture, System of
Systems, Model-based Systems
Engineering (MBSE)

SWISSED24

MISSION 1: Find Gap and Evaluate Impact Faster

- Regulated environments require documentation
- Project documentation is extensive
- Finding critical points is of utmost importance

MISSION 1: Find Gap and Evaluate Impact Faster

- Requirements and architecture change
- Efficient analysis of the effects
- Identification of new risks and opportunities

MISSION 2: System Models Translation Into Business Language

MBSE Promise

- System models = technical descriptions
- Traceability improves analysis
- Single source of truth

MBSE Challenge

- Model creators “own” their models
- Communication is still an obstacle
- Large models are difficult to navigate

**Special agent-based software:
Use Gen AI to explain System Models
to all Stakeholders**

Step 1: Securely upload an XMI file of your Model

Loading

Indexing

Storing

Step 3: Indexed data stored in a secure database

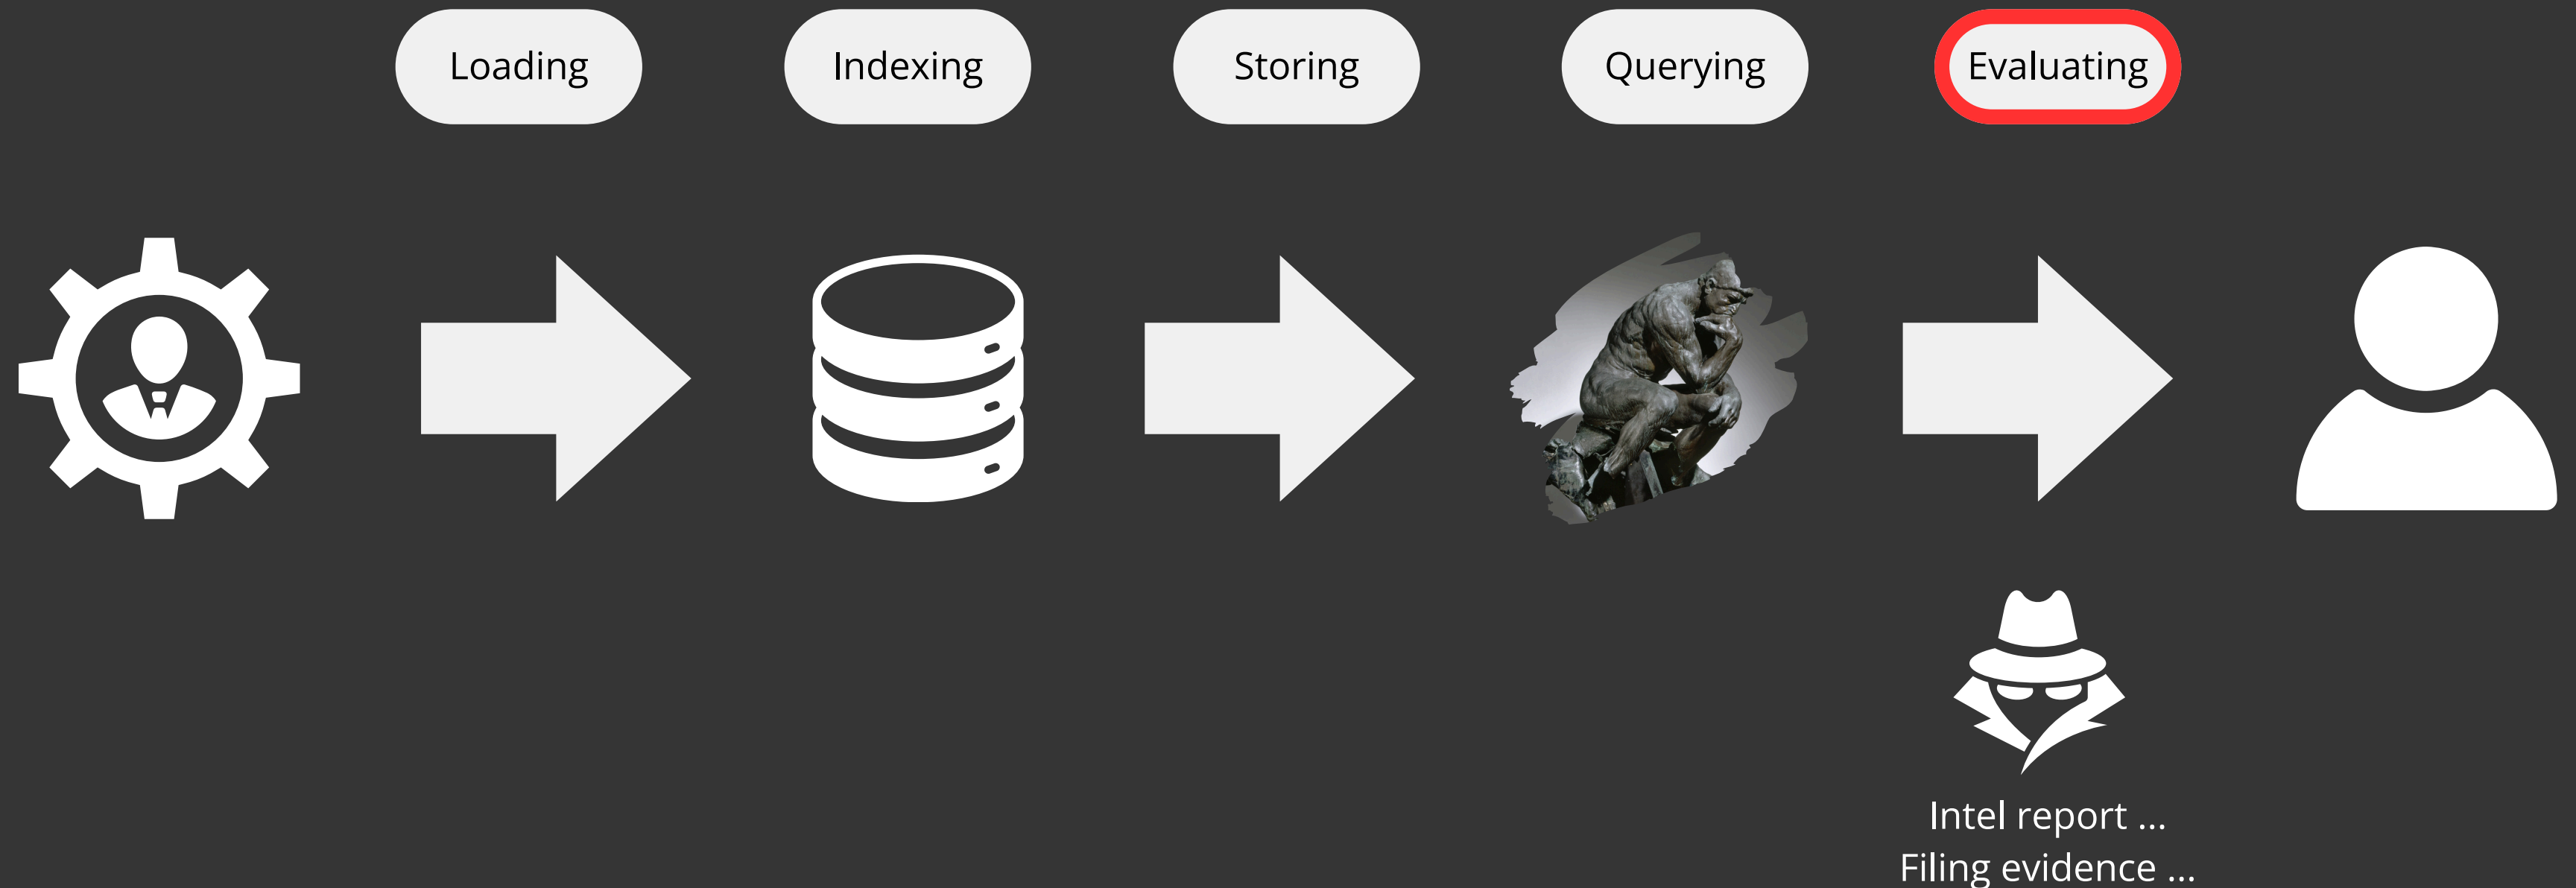

Step 4: Agent-based software queries database

Step 5: Gen AI produces factual content

With Special Agent software: Intelligence in == Intelligence out

**Without Special Agent software:
Garbage in == Garbage out**

Debriefing
