

# SUSTAINABILITY IMPULSE

From Chaos to Clarity –  
Mastering Complexity with  
Feature-Based Requirements  
Engineering

Oliver Fels  
SwissEd 2025

## Enemy of the state: Complexity

The number one evil

More requirements  
More dependencies  
More complexity  
More Chaos

## Yet another complexity driver: History

From euphoria to chaos

### Typical real word example

Company X

In business: 25 years

Product lines: 4

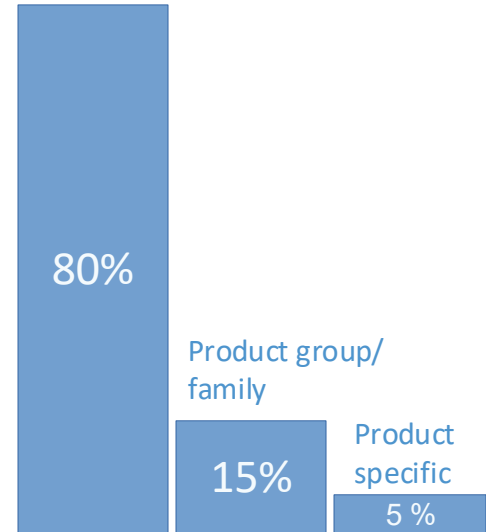

Product families per group: 5

**Number of products in SAP: 12000**

**Number of requirements: Unknown**

**Number of requirements dependencies: too many**

Global requirements  
Norms, corporate, market, etc.

Typical distribution of requirements

## Typical shortcomings

~~ReUse~~  
~~Modularity~~  
~~Synergy usage~~  
~~Structure~~  
~~Dependency Management~~  
~~Common Methodology~~

## Typical results

Misunderstandings  
Redundant work  
Quality issues  
Lack of oversight  
Knowledge drain  
Many more

## The role of requirements & stakeholder management

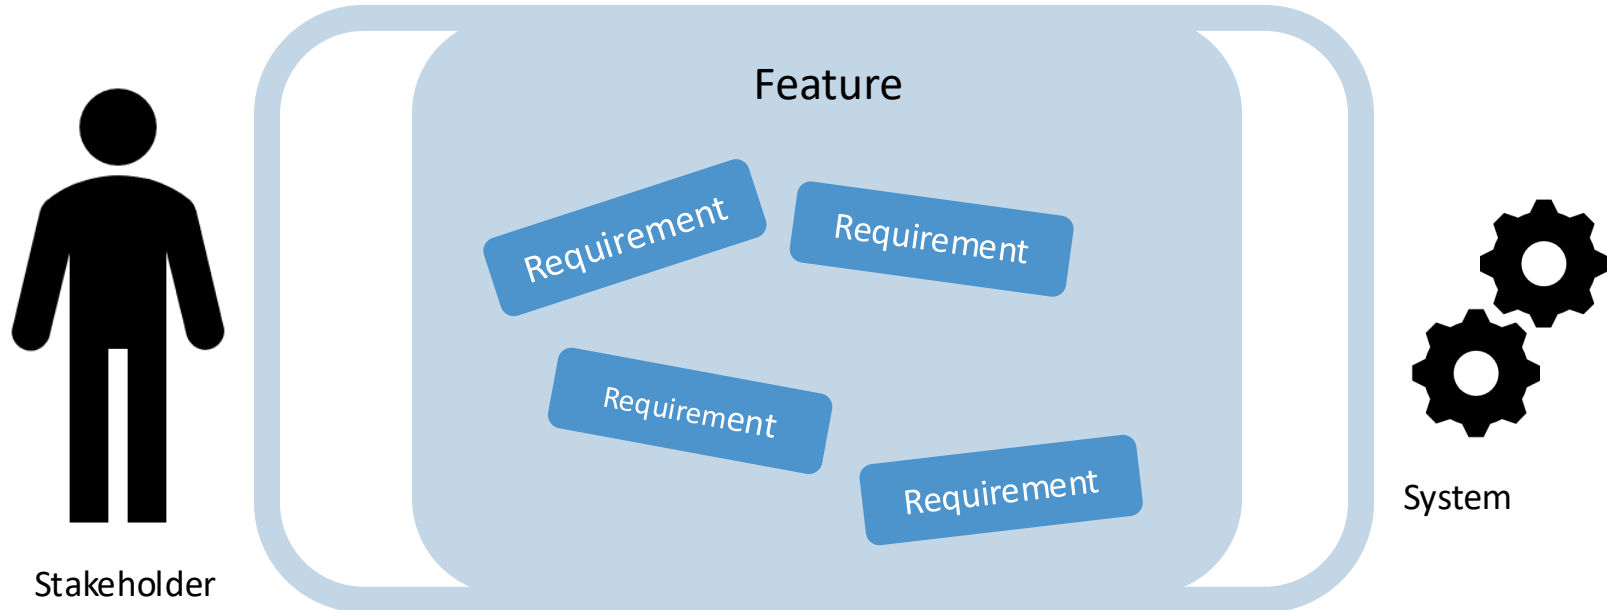

- First line of defense against costly mistakes
- Communication base
- Portfolio enabler and organizer
- Quality Enabler

What it needs: A consistent methodology encouraging reUse, modularity and structure

## Introducing Feature Based Requirements Engineering (FBRE)

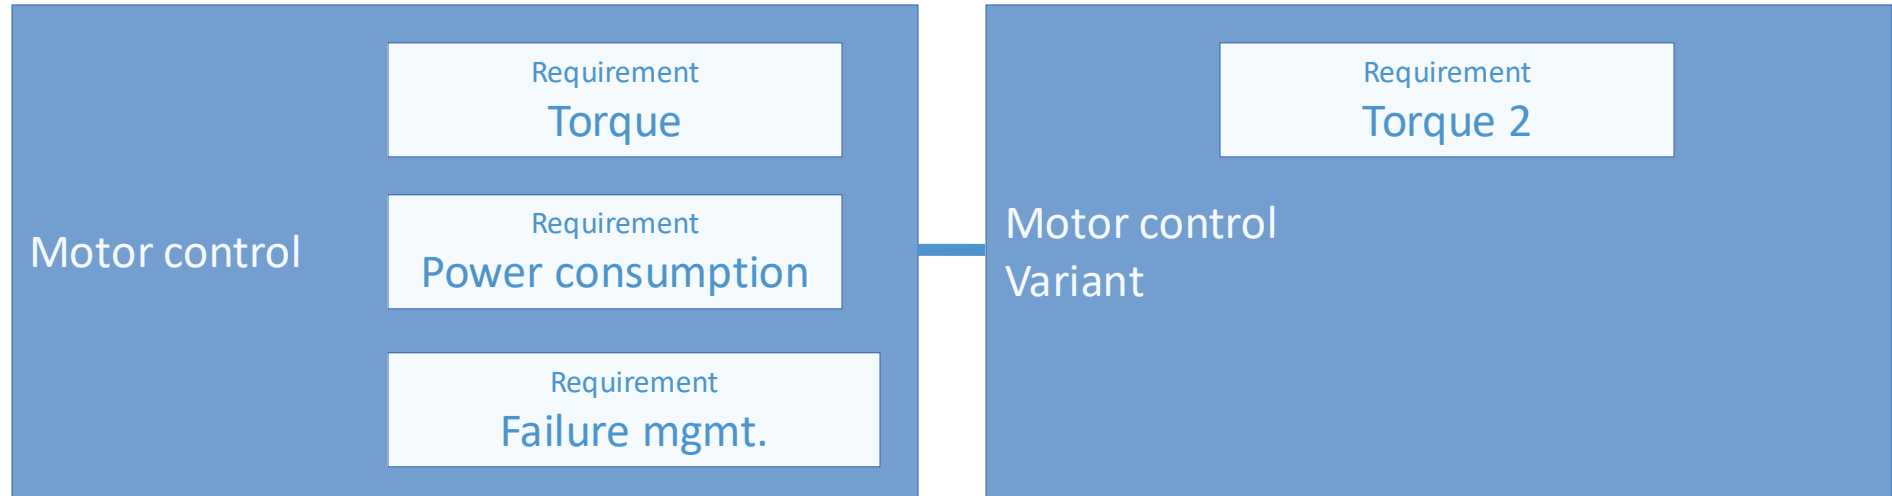

The feature – an encapsulating entity

## Introducing Feature Based Requirements Engineering (FBRE)

### Examples

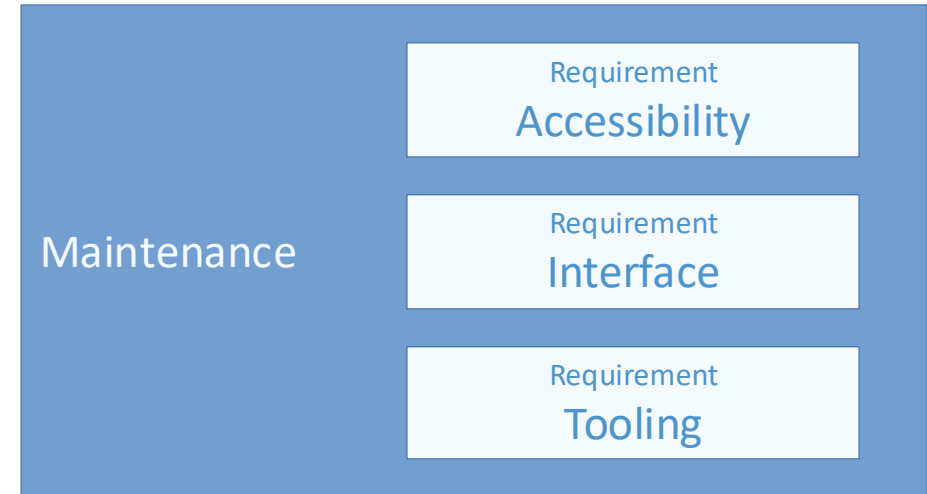

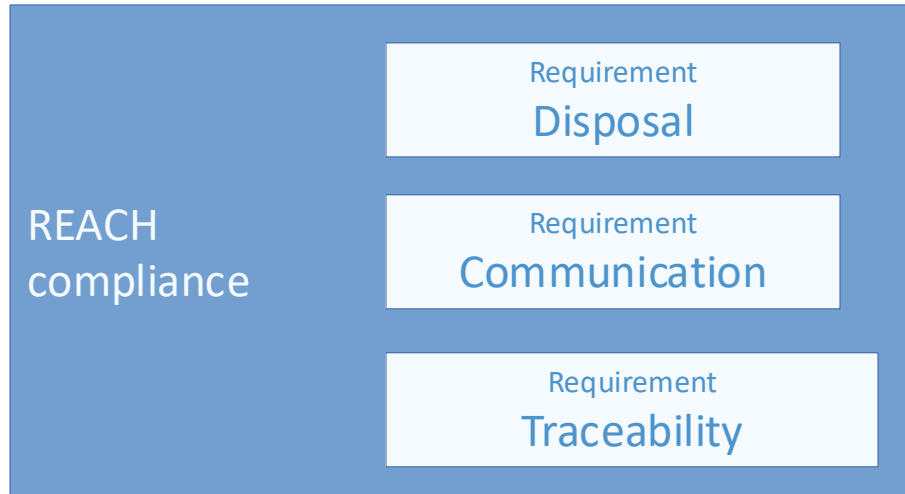

Feature encapsulates every spec. regarding motor control. Variants inherit from the parent.  
Result: Corporate wide, there is only one definition of “motor control” to be referenced.

## Introducing Feature Based Requirements Engineering (FBRE)

### Examples

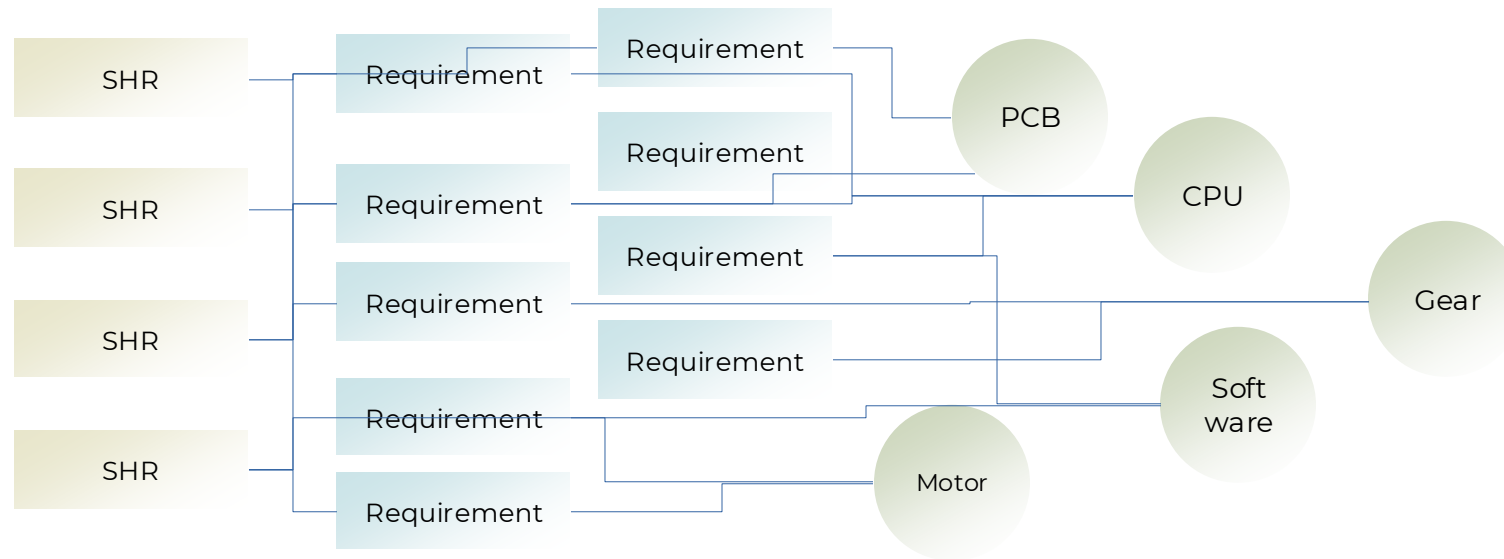

Features encapsulate knowledge in a unique and modular way be reUsed.

## Introducing Feature Based Requirements Engineering (FBRE)

### Assigning to components/products - Before

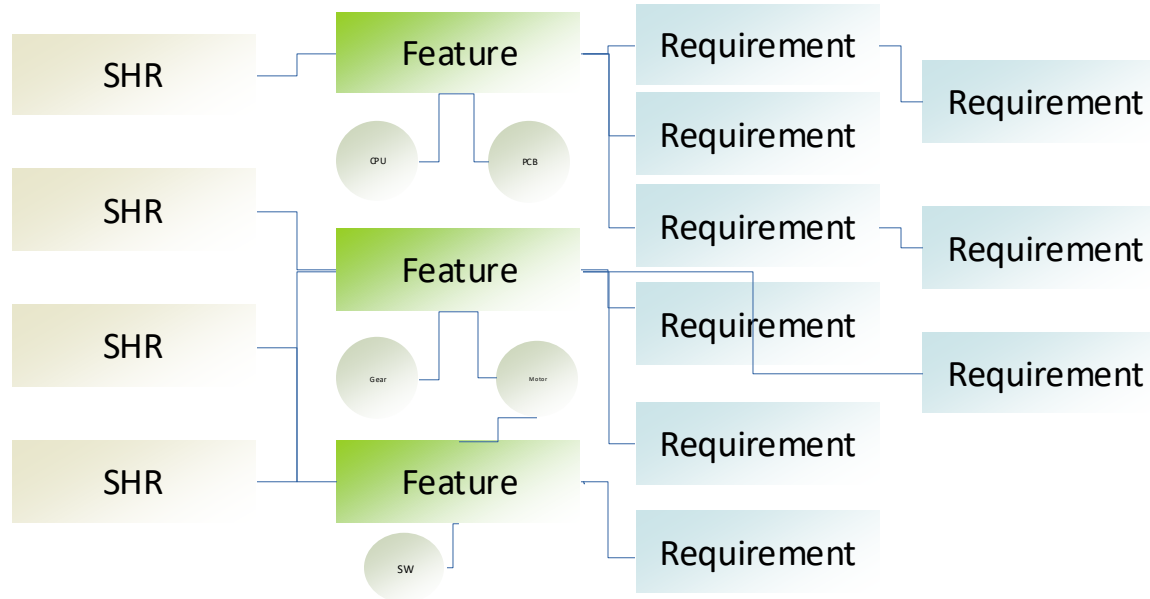

Requirements have m:n relationships in a way which increases the dependency complexity

## Introducing Feature Based Requirements Engineering (FBRE)

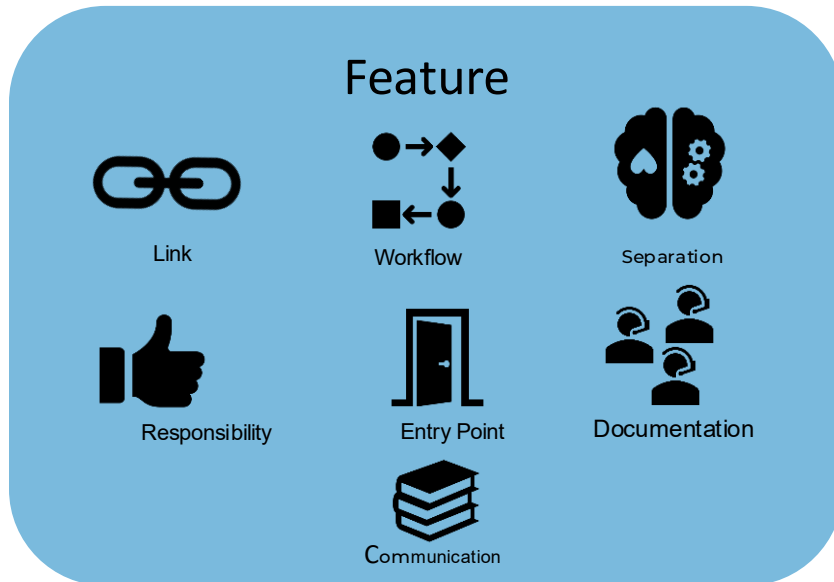

### Assigning to components/products - After

Linking components and products to features greatly reduces complexity.

## Benefits of a game changer

- Glues together stakeholder and solution space.
- Associating features and epics improves the workflow
- Enables feature responsibility and commitment
- Is an entry point for documentation, impact % gap analysis
- Enables reUse and modularity
- Provides a common ground to talk about
- Streamlines communication
